The diagram illustrates the SARS-CoV-2 genome as a horizontal bar divided into four segments. The first segment is yellow and labeled '74'. The second segment is teal and labeled '59'. The third segment is red and labeled '81'. The fourth segment is grey and labeled '138'. Below the genome, four teal vertical bars represent the spike protein genes. The first gene, labeled '15', is located within the first segment. The second gene, labeled '14', is located within the second segment. The third gene, labeled 'S3', is located within the third segment. The fourth gene, labeled 'S4', is located within the fourth segment. The labels '15', '14', 'S3', and 'S4' are positioned below their respective genes.
